

# Modular Boiler Room System

## Modular Commercial Components

Meibes makes commercial installations quick and easy with an extensive line of boiler room products specifically engineered for commercial, industrial, and institutional applications. Loaded with features these modular components are designed with the contractor in mind. Preassembled, tested and ready to install, our commercial manifold beams and pump groups are faster, easier and less expensive to install compared to on-site fabrication.

Providing the ultimate in flexibility, project and design engineers can quickly select from a wide range of pre-engineered components. These modular components can be combined in a variety of configurations creating a versatile and cost effective system that can be modified to meet your specific needs. Once on-site they are easily assembled and will fit through a standard 36" doorway making this system the perfect solution for both new construction and retrofit applications.

- Preassembled, tested and ready to install
- Faster, easier and more economical in comparison to on-site fabrication
- Components incorporate the Victaulic pipe joining system and Meibes Flange technology for trouble-free performance and long-term reliability
- Modular design can be configured to meet the specific needs of your project
- Perfect solution for both new construction and retrofit applications
